Earth-Science Editors Meet in Ohio

Ohio State was invaded twice this fall by representatives of The University of Oklahoma. Still basking in the warmth of glowing reports about OU's football team, three Oklahoma Geological Survey staff members journeyed to Columbus to hear reports of a different sort. Bill Rose, OGS geologist-editor, and Rosemary Hardage and Betty Ham, OGS associate editors, attended the 10th anniversary meeting of the Association of Earth Science Editors.

Session topics ranged from basic typography and readability to the price of editorial excellence. Marty Edwards of Edwards Brothers, Inc. (a printing firm), presented advice on evaluating printing bids, and Jack Zanzig of Bergstrom Paper Co. presented the group with information, and admonitions, about paper availability and suitability. One session was devoted to a discussion of the Copyright Clearance Center, which has been established as a result of the new copyright law passed in 1976 and which goes into effect January 1, 1978.

Bill and Rosemary co-chaired a workshop for geological survey editors, along with Barbara Harris of the Missouri Geological Survey. Rosemary was elected to a 3-year term on the AESE Board of Directors and was named to serve on the association's program committee for the 1978 convention, which will be held in Butte, Montana, in September.

The Association of Earth Science Editors was founded in 1967 by 38 editors who gathered in Columbus at the American Chemical Society's Chemical Abstracts Service to discuss methods of improving publications that disseminate the results of geological investigations. In 10 years, the membership has grown to more than 200 persons from throughout the United States, Canada, and Mexico, plus several from overseas countries—but the goals of the group remain the same.

Persons interested in additional information about the association, which is a member society of the American Geological Institute, are welcome to contact the OGS editorial staff at the address on the front cover.

Mail Orders Accepted for USGS Open-File Reports

As of October 1, copies of most U.S. Geological Survey open-file reports can be purchased by mail from a centrally located facility at Denver, Colorado.

Previously, copies of USGS open-file reports were available for public inspection, or copies could be obtained at the purchaser's expense—not by mail—at designated survey libraries, public inquiries offices, or other facilities. Now they can be ordered from Open-File Services Section, Branch of Distribution, U.S. Geological Survey, Box 25425, Federal Center, Denver, Colorado 80225 (phone, 303—234-5888). Prepayment is required by checks or money orders payable to the USGS and in the exact amount. Orders should be placed by series and number (such as Open-File Report 77-123) and complete title.

The address given is for open-file reports only, not for other USGS publications.
